HARNESS ENERGY THAT'S ABSOLUTELY FREE!

E-Z Trail Model 100 "Labor Saver" Bale Basket

The bale plunger packs enough punch to push the bales up the chute into the basket. The **free energy** comes from your baler by reducing some of the spring tension at the bale chamber. The bales going up the chute simply provide some of the back pressure required to compress the bales. Therefore you **eliminate all manual labor** without adding any burden to your baler.

The standard basket capacity is approximately **100 bales** and unloads by gravity, "more free energy." A simple trip lever releases the rear gate latch and in a **matter of seconds** the basket is ready to load up again. Options available: 3' 30 bale extension, center hitch for N.H. balers.

The basket dimensions are 12'6" long and 11' high. The **special width** 10' front, 11' rear is a patented feature. The tapered sides allow bales to **unload quick and E-Z** without lodging. Tire size 11L 15 8 ply; wobble free caster wheel 20.5 x 10. Basket is shipped with axle, floor and sides **pre-assembled**, final assembly requires 1-2 hours. High strength square tubing 4" x 1/4" axle 1-1/2" 12 gauge and 1-1/4" 14 gauge.

Here's what others say:

*"My Bale Basket **works on any hills** that I can drive my tractor on. It is the labor-savingest machine on my farm."*

—S.P., New Galilee, PA

*"Over the last 25 years I have owned some very expensive bale handling equipment, but my Bale Baskets **work better than anything** I have ever used."*

—J.D., Rockford, IL

*"We feel our two Bale Baskets have **paid for themselves** in one season. They work much better than I thought they would. I now enjoy baling."*

—E.B., Fowler, MI

*"My Bale Basket receives the bales from my new J.D. model 336 baler as **fast as I can drive**. My only regret is that I didn't have one 20 years ago. I absolutely love it!"*

—P.R., Groveport, Oh
